BioTransLab

Bio.electro.chemistry and their intra active entanglements.
Bio-trans-lab, conceived and coordinated by Paula **Pin** from **Pechblendalab**, is one of the multiple disruptive nodes of Hackteria, is a nomadic laboratory open to experimentation with the body and technology, based on the proposal to learn by doing. As a queer transhackfeminist science laboratory (s), this lab seeks the opening of a particular space-time, a place for the confluence of cyber-cyborgs, cyberwitches and alchemists.

An invitation to experiment and be traversed by the practical experience of **noiSEX disturbance**, **DIWO or DIT** tools, fluids and non-static bodies. It is precisely this extended and non-static body, the tentacular, becoming the condition of possibility to be crossed by the performativity of matter, moving us beyond mere individuality, **performing science through collective doings.**

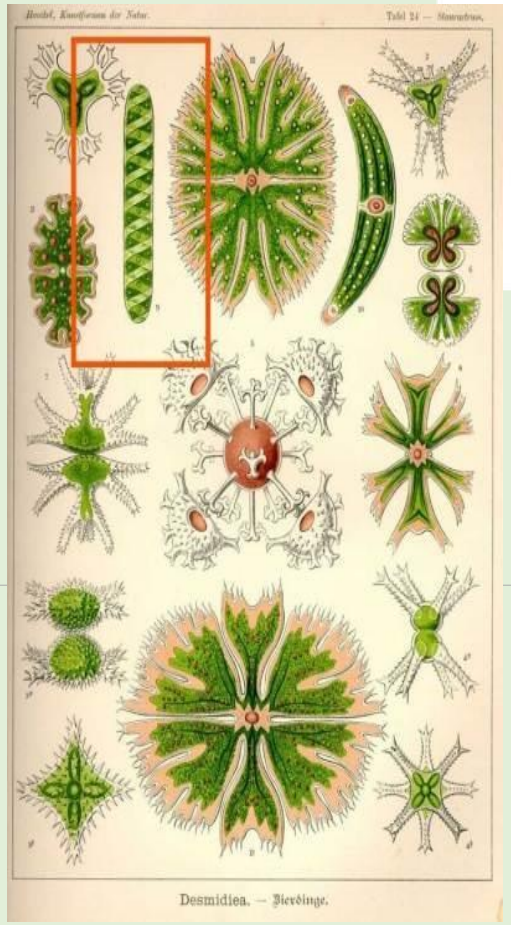
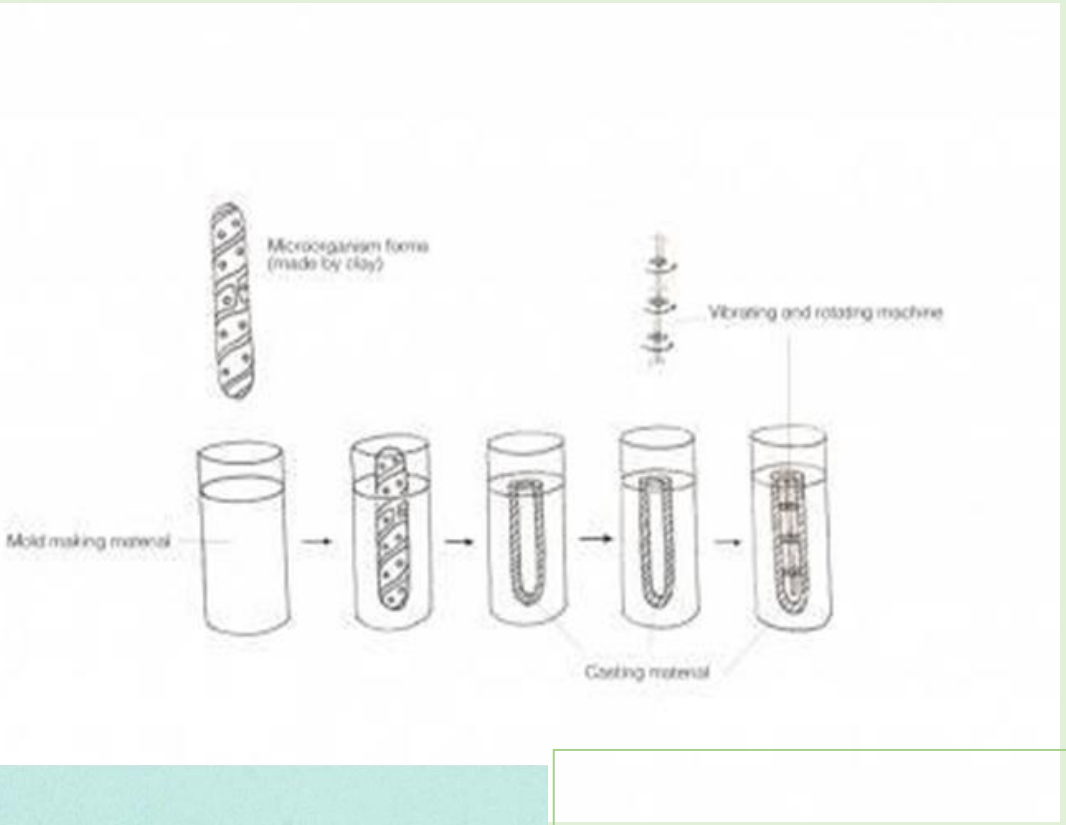
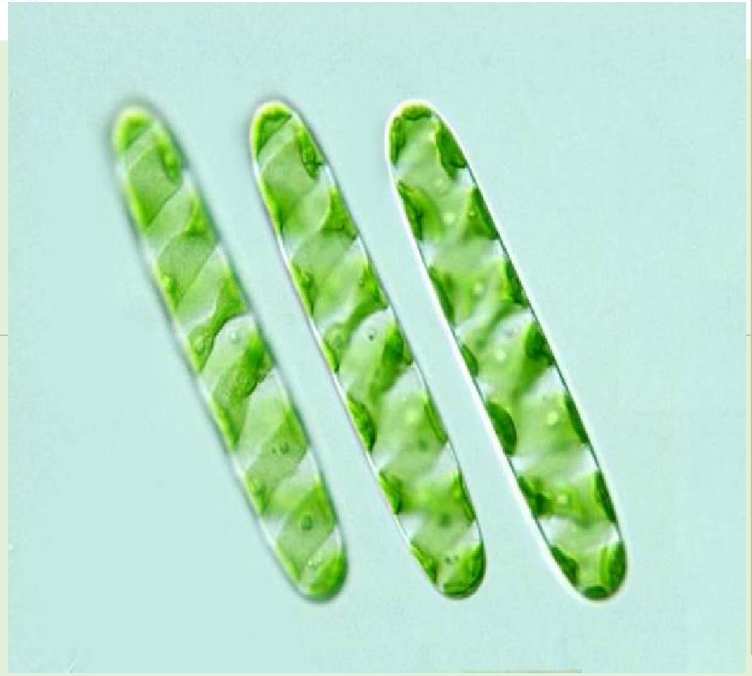
Cada dispositivo Open Science Friction y HardGlam está documentado en un Fanzine para posibilitar la réplica de los mismos, construyendo caminos más fértiles y abiertos.

Dildomancy



Spirotaenia condensata





Following this idea about DIWO we are thinking to facilitate a workshop about Dildomancy right now you can check it our wiki to see what it this means and tomorrow we will talk all together when and where the workshop could be ...

sex, body and horizontal transfer information ... like bacterias ! !

"FOtoSINTETIKA" es un proceso de desarrollo de este sistema de escucha atenta de la naturaleza, las finalidades o líneas de desarrollo son amplias, las más evidentes: revelar lo no audible y configurar nuevas aperturas a través de la multiplicidad del NOISE.

"Fotosintétika" es un proceso de investigación y desarrollo que tiene lugar durante los meses de Marzo y Abril en el contexto del ecoLAB-

La investigación con origen en los ecosistemas naturales y la biología de los sistemas complejos profundiza a través de hipótesis y especulaciones la estrecha relación de la tecnología y la natura.

SON

01

O encontro coa Natura a través da escoita [[[]]]]

O proceso de investigación a desenvolver tradúcese nunha experimentación consciente de NATURA a través da escoita. Tomando isto como eixo central queremos realizar unha experimentación colectiva, un ecosistema autopoético composto por organismos humanos, vexetais e tecnolóxicos.

Este taller tomaría plantas e microorganismos locais como punto de partida para desenvolver novas narrativas, debuxar metodoloxías e teorizar sobre organismos non humanos. Esta experiencia teórico-práctica como presentación reflexiva introducirá á poboación local no estudo e experimentación creativa da natureza.

Obradoiro Bioloxia TransFeminista :

Creación colectiva dun espazo para o estudo da natureza no que a través de practicas de bioloxía caseira se propicie o pensamento crítico. O laboratorio interactúa cos campos transversais da ecoloxía feminista, o traballo con ferramentas libres e de código aberto e o acceso as ciencias abertas e experimentais fóra dos laboratorios institucionais.

transhackfeminismo/ performatividad de la ciencia

El origen de la vida entendido como la turbulencia de los fluidos funciona como metáfora de las nuevas biosofías de colisión, fricción y simbiosis de entes cuánticos. Somos materia en constante cambio, mentes que ya no son más ni objeto ni sujeto de la libre y autoritaria definición de la cultura establecida.

Pechblenda https://network23.org/pechblendalab/
As a transhackfeminist bio electro chemical lab, we live in a constant performance,
acquiring and sharing knowledge with huge doses of experimentalism and Noise.X. We
take part in the biohacking network hackteria.org from 2012.
The desire to generate open access to technologies has led them to carry out workshops
and highly interdisciplinary research sessions frequently open up new directions and
fruitful collaborations around the world to explore through experiments and acquire
situated knowledge about queer natures and surroundings.
At the moment, we are immersed in the scientific and witchcraft, whatever knowledge
that give us the pleasure to build home bio punk labs. The hardware electronic lab was
naturally becoming with BiO and CHEMICAL agencies to construct applicable tools for
self-management, among others, of health. Check here some tentacles

BioTransLab entanglements

BiotransLab coordinado por Paula Pin de Pechblendalab, es uno de los múltiples nodos disruptivos de Hackteria. Es un laboratorio nómada abierto a la experimentación con el cuerpo y la tecnología, basado en la propuesta de aprender haciendo.

Como laboratorio (s) de ciencia queer, este laboratorio busca la apertura de un espacio-tiempo particular, un lugar para la confluencia de cyberwitches y alquimistas Una invitación a experimentar y ser atravesado por la experiencia práctica de la perturbación noiSEX, a través de herramientas DIWO o DIT, fluidos y cuerpos no estáticos. Es precisamente este cuerpo extendido y no estático, el tentacular, convirtiéndose en la condición de la posibilidad de ser atravesado por la performatividad de la materia, moviéndonos más allá de la mera individualidad, realizando la ciencia a través de a través de acciones colectivas.
